

# Introducing Comorbidity Database™

from MattsonJack, a world leader in epidemiology data

The presence of comorbid risk factors or diseases can dramatically impact forecasting accuracy, depending on the depth of overlap or exclusivity within a market.

The Comorbidity Database™ from MattsonJack — a world leader in epidemiology and forecasting — can help provide the data you need for a more in-depth understanding of the opportunity.

# Comorbidity Database™

Comorbidity Database™ is designed specifically to help clients make strategic decisions based on an in-depth understanding of the importance of mutually exclusive and overlapping conditions.

Comorbidity Database™ – CNS 2.0 focuses on mental health disorders.

The National Comorbidity Replication Survey is a national survey of approximately 10,000 people 18 years and older in the United States. The most recent data available is from the survey conducted in 2001-2002. The survey used a fully structured interview to examine mental health disorders. Included were anxiety disorders, mood disorders, impulse control disorders, and substance use disorders.

- ◆ Major Depressive Disorder (MDD)
- ◆ Generalized Anxiety Disorder (GAD)
- ◆ Panic Disorder
- ◆ Post-Traumatic Stress Disorder (PTSD)
- ◆ Social Phobia
- ◆ Obsessive Compulsive Disorder (OCD)

Comorbidity Database™ – Med 2.0 features a broad range of medical diagnoses and risk factors, excluding mental health disorders.

The National Health and Nutrition Examination Survey (NHANES) is a large, population-based study that is designed to assess the health and nutritional status of adults and children in the United States. The survey is unique in that it includes detailed data from household interviews, medical examinations, and laboratory analysis. Since 1999, the survey has included over 31,000 respondents. The most recent survey available was conducted in 2003-2004 and included approximately 10,000 respondents.

- ◆ Dyslipidemia
- ◆ Diabetes
- ◆ Asthma
- ◆ Hypertension
- ◆ Congestive Heart Failure
- ◆ Metabolic Syndrome
- ◆ Post Myocardial Infarction
- ◆ Angina
- ◆ Stroke
- ◆ Smoking
- ◆ Peripheral Artery Disease
- ◆ Low-Density Lipoproteins
- ◆ High-Density Lipoproteins
- ◆ Triglycerides
- ◆ Body Mass Index
- ◆ Fasting Plasma Glucose
- ◆ C-Reactive Protein
- ◆ Waist
- ◆ Framingham Score
- ◆ Total Cholesterol

The separate but complementary Comorbidity Database™ modules are available as an annual subscription\*, with the flexibility of purchase separately or together (CNS 2.0 and/or Med 2.0). Each site license will be offered with discounts for multiple sites. Additional discounts may be available for Epi Database® subscribers.
